# 20-2 Animal-like Protists: Protozoans

## 20–2 Section QUIZ

- 1 Structures found in sarcodines that are used for feeding and movement are known as
- a. pseudopods.
  - b. flagella.
  - c. cilia.
  - d. food vacuoles.

## 20–2 Section QUIZ

**1** Structures found in sarcodines that are used for feeding and movement are known as

a. pseudopods.

b. flagella.

c. cilia.

d. food vacuoles.

## 20–2 Section QUIZ

- 2** The structure found in most ciliates that contains a “reserve copy” of all the cell's genes is the
- a. macronucleus.
  - b. micronucleus.
  - c. trichocysts.
  - d. contractile vacuole.

## 20–2 Section QUIZ

- 2 The structure found in most ciliates that contains a “reserve copy” of all the cell's genes is the
- a. macronucleus.
  - b. micronucleus.
  - c. trichocysts.
  - d. contractile vacuole.

## 20–2 Section QUIZ

- 3** One way to classify the various groups of animal-like protists is by
- the presence of a nuclear membrane.
  - the presence of mitochondria.
  - their means of movement.
  - the number of contractile vacuoles.

## 20–2 Section QUIZ

3

One way to classify the various groups of animal-like protists is by

- a. the presence of a nuclear membrane.
- b. the presence of mitochondria.
- c. their means of movement.
- d. the number of contractile vacuoles.

## 20–2 Section QUIZ

- 4 Malaria is caused by the sporozoan
- a. *Plasmodium*.
  - b. *Anopheles*.
  - c. Amoeba.
  - d. *Paramecium*.

## 20-2 Section QUIZ

4 Malaria is caused by the sporozoan

a. *Plasmodium*.

b. *Anopheles*.

c. *Amoeba*.

d. *Paramecium*.
