Slide 2 of 33

- 1
- The function of accessory pigments in various groups of algae is to
 - a. absorb red and violet light.
 - b. carry out photosynthesis in the absence of chlorophyll.
 - c. increase the range of wavelengths used for photosynthesis.
 - d. carry out photosynthesis when sunlight is not available.

20-3 Section QUIZ

- 2
- Which of the following describes structures found in euglenophytes?
 - a. chloroplasts but no cell walls
 - b. chloroplasts and cell walls
 - c. cell walls but no chloroplasts
 - d. no cell walls or chloroplasts

Slide 5 of <u>33</u>

- 2
- Which of the following describes structures found in euglenophytes?
 - a. chloroplasts but no cell walls
 - b. chloroplasts and cell walls
 - c. cell walls but no chloroplasts
 - d. no cell walls or chloroplasts

Slide 6 of 33

- 3
- Plantlike protists with gold-colored chloroplasts are the
 - a. euglenophytes.
 - b. diatoms.
 - c. chrysophytes.
 - d. dinoflagellates.

Slide 7 of <u>33</u>

- 3
- Plantlike protists with gold-colored chloroplasts are the
 - a. euglenophytes.
 - b. diatoms.
 - c. chrysophytes.
 - d. dinoflagellates.

Slide 8 of <u>33</u>

4

The base of most marine food chains is made up of

- a. zooplankton.
- b. euglenophytes.
- c. phytoplankton.
- d. chrysophytes.

Slide 9 of 33

4

The base of most marine food chains is made up of

- a. zooplankton.
- b. euglenophytes.
- c. phytoplankton.
- d. chrysophytes.
